

## **EPIC Crude Oil Pipeline Announces Extension of Second Open Season**

SAN ANTONIO - August 31, 2018 - EPIC Midstream Holdings, LP ("EPIC") announced today that it is extending its second open season for its Crude Oil Pipeline that began on August 1, 2018 and was originally scheduled to end on August 31, 2018. Due to a high level of continued interest, the second open season is being extended until 5PM CST September 14, 2018.

Based upon the results from the second open season, EPIC will consider upsizing from a 24-inch line to a 30-inch line, expanding its Permian Basin capacity.

EPIC Crude Oil Pipeline successfully closed its first open season on July 26, 2018 and executed definitive agreements with new primary shippers. Shippers have secured 425 MBbl/d of capacity originating from the Permian Basin on the EPIC Crude Oil Pipeline.

The EPIC Crude Oil Pipeline will run side-by-side with the EPIC NGL Pipeline extending from Orla, Texas to the Port of Corpus Christi, Texas and includes terminals in Orla, Saragosa, Wink, Midland, Helena and Gardendale, with Port of Corpus Christi connectivity and export access. It will service the Delaware, Midland and Eagle Ford Basins. The crude system is expected to be in service in the fourth quarter of 2019. The EPIC Pipelines are backed by capital commitments from funds managed by the Private Equity Group of Ares.
